I. What is bitcoin?

The background of the slide is a close-up photograph of several Bitcoin coins. One coin is prominently stacked on top of others in the center, showing the Bitcoin logo and the word 'BITCOIN'. Other coins are visible in the foreground and background, some slightly out of focus. A semi-transparent grey rectangular box is overlaid on the left side of the image, containing the text.

Bitcoin /'bit·koin/

1. an unbacked digital currency that enables individuals to make and receive payments over the Internet, processing these transactions through a distributed clearing system.
2. a unit of Bitcoin, equal to 100,000,000 satoshis.

II. Is bitcoin essential?

Essentiality of Money and Bitcoin

In general, economists think money is essential because it allows us to:

- Overcome double coincidence of wants
- Reduce information costs
- Achieve a more desirable set of allocations

Essentiality of Money and Bitcoin

In general, economists think money is essential because it allows us to:

- Overcome double coincidence of wants
- Reduce information costs
- Achieve a more desirable set of allocations

In order to be essential, bitcoin must be a *better* money than the available alternatives.

The All-Or-Nothing Fallacy

The all-or-nothing fallacy is a type of false dichotomy, where only two outcomes are presented (all, nothing) while a spectrum of outcomes is possible.

The All-Or-Nothing Fallacy

The all-or-nothing fallacy is a type of false dichotomy, where only two outcomes are presented (all, nothing) while a spectrum of outcomes is possible.

III. Is the blockchain
technology essential?

A partial list of blockchain applications

- Identity Documents
 - Birth certificates
 - Death certificates
 - Social security numbers
 - Voter registration cards
- Voting mechanism
- Property title transfers
- Sharing medical data
- Supply chain and logistics monitoring
- Music royalties tracking
- Real-time IoT operating systems
- Advertising insights
- Original content creation

... and much, much more!

Can-Should Confusion

Just because one *can* use a blockchain does not mean one *should* use a blockchain.

Instead, one should consider the application and ask whether the unique features of the blockchain technology make it preferable to other ledger-keeping technologies.
